Appendix to the EMBL Data Library, July 1999

Bescription: Pyrococcus abyssi genome sequence: insights into archaeal chromosome stru-

Reference number: A75001

Accession: G77208

Status: preliminary

Molecule type: DNA

Residues: 1-131 < KAWA

Residues: 1-131 < KAWA

Accession: G75208

Status: Streininary

Accession: G75208

Status: BNA

Accession: G75208

A, Experimental source: GB:AB000177, GB:U00096, NID:g1786955, PIDN:AAC73830.1; PID:g1786957;
A, Experimental source: strain K-12, substrain MG1655
C, Comment: This is one of the proteins, encoded by the fii-tolAB gene cluster, that is is Genetics:
A, Gene: ybgC
A, Map position: 17 min
A, Start codon: GTG
C, Superfamily: 15.5K protein (tolAB operon 5' region)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ypothetical protein - Symechocystis sp. (strain PCC 6803)
Species: Symechocystis sp.
Species: Synechocystis sp.
Accession: S76416

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Science 269:496-512(1995).
-!- FUNCTION: This protein is one of the 16S ribosomal RNA binding proteins (By similarity).
-!- SIMILARITY: Belongs to the S15P family of ribosomal proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                               01-NOV-1995 (Rel. 32, Created)
01-NOV-1995 (Rel. 32, Last sequence update)
28-FBB-2003 (Rel. 41, Last annotation update)
30S ribosomal protein S1S,
(RPSO-A OR RPSI5-A OR HI1328) AND (RPSO-B OR RPSI5-B OR HI1468)
Haemophilus influenzae.
                                                                    .

The complete genome of hyperthermophile Methanopyrus kandleri AV19
RT and monophyly of archanogens."
Proc. Natl. Acad. Sci. U.S.A. 99:4644-4649.

C. --- FUNCTION: Binds double-stranded DNA tightly but without sequence specificity. It is distributed uniformly and abundantly on the chromosome, suggesting a role in chromatin architecture. However, it does not significantly compact DNA (By similarity).

C. --- SUMINT: Homoterraner (By similarity).
C. --- FTM: Acetylated. Deacetylation by the SIR2-homolog deacetylase increases its DNA-binding affinity, thereby repressing represent the archaeal histone-like Alba family.

C. --- SIMILARITY: Belongs to the archaeal histone-like Alba family.

C. --- SIMILARITY: Belongs to the archaeal histone-like Alba family.

C. --- SIMILARITY: Belongs to the archaeal histone-like RMBL outstation between the Swiss Institute of Bioinformatics and the EMBL outstation.

Andoh T., Nagasawa H.;
"Two molecular forms of insulin from barfin flounder, Verasper moseri, are derived from a single gene.";
are derived from a single gene.";
2001. Sci. 15:931-937(1998).
-!- FUNCTION: Insulin decreases blood glucose concentration. It increases cell permeability to monosaccharides, amino acids and fatty acids. It accelerates glycolysis, the pentose phosphate cycle, and glycogen sytthesis in liver.
-!- SUBUNIT: Heterodimer of a B chain and an A chain linked by two
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             SPECIES=L.americanus;

                                                                                piscatorius).";
Hoppe-Seyler's Z. Physiol. Chem. 350:1286-1288(1969).
-I-FUNCTION: Insulin decreases blood glucose concentration. It increases cell permeability to monosaccharides, amino acids and fatty acids. It accelerates glycolysis, the pentose phosphate cycle, and glycogen synthesis in liver.
-I-SUBUNIT: Heterodimer of a B chain and an A chain linked by two
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       STRAIN=Berkeley;

                                                                                                                                                                                                                                                                                                                               Canty J.M., Young R.F., Fallavollita J.A.;
Submitted (MAR.1998) to the EMBL/GenBank/DDBJ databases.

-!- FUNCTION: Facilitative glucose transporter. This isoform likely mediates the bidirectional transfer of glucose across the plasma membrane of hepatocytes and is responsible for uptake of glucose by the beta cells, may comprise part of the glucose-sensing mechanism of the beta cell. May also participate with the Na(+)/glucose cotransporter in the transcellular transport of glucose in the small intestine and kidney (By similarity).

-!- SUBCELLULAR LOCATION: Integral membrane protein.

-!- SIMILARITY: Belongs to the sugar transporter family. Glucose transporter subfamily.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

-i - FUNCTION: Decarboxylation of S-adenosylmethionine provides the aminopropyl molety required for spermidine biosynthesis from putrescine (By similarity).
-! - CATALYTIC ACTIVITY: S-adenosyl-L-methionine = (5-deoxy-5-adenosyl) (3-aminopropyl) methylsulfonium salt + CO(2).
-! - COFACTOR: Pyruvoyl group (By similarity).
-! - COFACTOR: Pyruvoyl group (By similarity).

Nature 390:364-370(1997).
-!- FUNCTION: Riboflavin synthase is a bifunctional enzyme complex catalyzing the formation of riboflavin from 5-amino-6-(1'-D)-ribityl-amino-2,4(1H,3H)-pyrimidinedione and L-3,4-dihydrohy-2-butanone-4-phosphate via 6,7-dimethyl-8-lumazine. The beta subunit
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     16-OCT-2001 (Rel. 40, Created)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
               2,4(1H,3H)-pyrimidinedione with L-3,4-dihydrohy-2-butanone-4-phosphate yielding 6,7-dimethyl-8-lumazine (By similarity).
-!- CAPALYTIC ACTIVITY: 2 6,7-dimethyl-8-(1-D-ribityl)lumazine = riboflavin + 4-(1-D-ribitylamino)-5-amino-2,6-dihydroxypyrimidine.
-!- PATHMAY: Riboflavin blosynthesis; last step.
-!- SIMILARITY: Belongs to the DMRL synthase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                A resolution.";
Science 289:905-920(2000).
-!- SIMILARITY: Belongs to the L13P family of ribosomal proteins.
catalyzes the condensation of 5-amino-6-(1'-D)-ribityl-amino-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Ban N., Nissen P., Hansen J., Moore P.B., Steitz T.A., "The complete atomic structure of the large ribosomal subunit at

Natl. Acad. Sci. U.S.A. 99:984-989(2002).

-Invorton: Acad. Sci. U.S.A. 99:984-989(2002).

-I FUNCTION: Riboflavin synthase is a bifunctional enzyme complex catalyzing the formation of riboflavin from 5-amino-6 (1'-D) ribity1-amino-2,4(1H,3H)-pyrimidinedione and L-3,4-dihydrohy-2-butanone-4-phosphate via 6,7-dimethy1-8-lumazine. The beta subunit catalyzes the condensation of 5-amino-6 (1'-D) ribity1-amino-2,4(1H,3H)-pyrimidinedione with L-3,4-dihydrohy-2-butanone-4-phosphate yielding 6,7-dimethy1-8-lumazine (By similarity).

-I CATALYTIC ACTIVITY: 2 6,7-dimethy1-8-(1-D ribity1) lumazine = riboflavin biosynthesis; last step.

-I PATHWAY: Riboflavin biosynthesis; last step.
-I SIMILARITY: Belongs to the DMRL synthase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

-!- FUNCTION: Riboflavin synthase is a bifunctional enzyme complex
catalyzing the formation of riboflavin from 5-amino-6-(1'-D)-
ribityl-amino-2,4(1H,3H)-pyrimidinedione and L-3,4-dihydrohy-2-
butanome-4-phosphate via 6,7-dimethyl-8-lumazine. The beta subunit
catalyzes the condensation of 5-amino-6-(1'-D)-ribityl-
amino-2,4(1H,3H)-pyrimidinedione with L-3,4-dihydrohy-2-
butanome-4-phosphate yielding 6,7-dimethyl-8-lumazine (By
                                                                                                                                                                                                                                                                                                                                                                                                                      -| CATALYTIC ACTIVITY: 2 6,7-dimethyl-8-(1-D-ribityl)lumazine = riboflavin + 4-(1-D-ribitylamino)-5-amino-2,6-dihydroxypyrimidine.
-| PATHWAY: Riboflavin biosynthesis; last step.
-| SIMILARITY: Belongs to the DWRL synthase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            MEDIJNE-88115138; PubMed=2828309; Deich R.A., Metcalf B.J., Finn C.W., Farley J.E., Green B.A.; Deich R.A., Metcalf B.J., Finn C.W., Farley J.E., Green B.A.; Cloning of genes encoding a 15,000-dalton peptidoglycan-associated outer membrane lipoprotein and an antigenically related 15,000-dalton J.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               FUNCTION: Riboflavin synthase is a bifunctional enzyme complex catalyzing the formation of riboflavin from 5-amino-6-(1'-D)-ribityl-amino-2,4(1H,3H)-pyrimidinedione and L-3,4-dihydrohy-2-butanone-4-phosphate via 6,7-dimethyl-8-lumazine. The beta subunit catalyzes the condensation of 5-amino-6-(1'-D)-ribityl-amino-2,4(1H,3H)-pyrimidinedione with L-3,4-dihydrohy-2-butanone-4-phosphate yielding 6,7-dimethyl-8-lumazine (By
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    MEDLINE=21456156; PubMed=11572479; Kawarabayasi Y., Hino Y., Horikawa H., Jin-no K., Takahashi M., Kawarabayasi Y., Hino Y., Horikawa H., Jon-no K., Takahi S., Sekine M., Baba S.-I., Ankai A., Kosugi H., Hosoyama A., Fukui S., Nagai Y., Nishijima K., Otsua R., Nakazawa H., Takamiya M., Kato Y., Yoshizawa T., Tanaka T., Kudoh Y., Yamazaki J., Kushida N., Oguchi A., Aoki K.-I., Masuda S., Yanagii M., Nishimura M., Yamagishi A., Oshima T., Kikuchi H.,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     "Differences in the regulation of messenger RNA for housekeeping and specialized-cell ferritin. A comparison of three distinct ferritin complementary DNAs, the corresponding subunits, and identification of
-i- TISSUE SPECIFICITY: Seems to be restricted to the hematopoietic compartment. Expressed in peripheral blood, spleen, and bone marrow, at moderate levels in lung, small intestine and testis, a minimal levels in other tissues. Also found in vascular smooth muscle cells and hematopoietic malignancies.
-i- INDUCTION: By phorbol ester and inflammatory cytokines, such as TNF-alpha, or IL-1-beta, but not by growth factors.
-i- SIMILARITY: Contains 1 Bcl-2 homology 1 (BH1) domain.
-i- SIMILARITY: Belongs to the Bcl-2 family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
